

## Tips for Success

**Water:** Water your plants immediately after taking them out of the box. Give them enough water so that the soil appears damp and water trickles out the bottom of the pot.

**Plants look Dry or Foliage appears Lackluster:** Sometimes plants may appear dried out and wilted after the voyage. Do not despair. When this happens the foliage may look lackluster but the rootstock is still perfectly healthy and alive. To plump your plants back up, water them and wait 5 minutes and then water them again. This will generally rehydrate them. Keep these plants well-watered until you can re-plant them into larger containers or in the garden within the next week. If plants arrive dry, it is often because the roots have outgrown the small shipping pots and need more room to grow; roots tend to dry out quickly in small containers. Your plants are very much alive and when you transplant them into larger pots or the earth, they will start growing quickly! So, re-plant them as soon as possible. Remove any yellow or brown foliage.

**Time to Plant!** Your plants are now ready to be replanted. Follow the planting guide inside for detailed instructions on how to most effectively plant your new plants.

**Indoors or Outdoors?:** This Senecio is a perfect plant for indoors or outdoors. Only plant directly in the ground outdoors if your winter stay quite warm and rarely dip to freezing. When planted in containers you may leave them outside as long as night temperatures are above 45F and then bring them inside. Alternatively, you may grow them indoors all year round in a very sunny window with good air flow.

**Angel Wings® Senecio:** This brand new Dusty Miller is the perfect silvery foliage plant for both indoor and outdoor gardens. This succulent plant is exceptionally drought tolerant once established. It produces velvety soft foliage that grows into rounded leaves resembling the wings of an angel. This unique plant is just as at home being the focal point of your indoor or outdoor garden as it is as a perfect filler for mixed containers. Truly a versatile gem of a plant.

## Quick Reference

**Plant Type:** Annual

**Light/Sun:** Full to Partial Sun

**Mature Height:** 10-12"

**Mature Spread:** 10-12"

**Bloom Time:** n/a

**USDA Hardiness Zones:** 7 to 11

## Plant Caretaking

**Upon Arrival:** Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm sunny area for 1-2 days before replanting.

**Planting Depth & Spacing:** Dig a deep enough hole so that the entire plant easily fits into the hole and the top of the soil line of your plant is flush with the top of the soil in the hole you have dug. It is important that the soil line of your plant does not protrude above the soil line in the ground or container. Space plants about 1' apart in the garden. Note that these plants should only be planted in the garden if you live where winters stay relatively warm

**Potted Plants:** Make sure your container has holes to allow excess water to drain. Place one plant in an 8-10" container, or you may plant multiple together in a larger pot.

**Soil Preparation:** If your soil is clayish, amend it with standard potting mix to improve drainage. These succulents like very well draining soil.

**Watering:** To determine if your plant needs water, put your finger in the top of the soil and if the top inch is dry, it is time to water. It is important to make sure young plants do not experience long periods of dryness. However, they also do not like soggy conditions. Allow soil to dry out completely between waterings.

**Fertilizer:** Use Roberta's Bounty a couple weeks after planting and then once a month all summer long. Too much fertilizer may cause plants to get leggy.

**Pet Considerations:** Ensure your pets do not consume plants.

**Pruning:** If plants are getting too tall and floppy, cut those leaves back as low as possible. Preferably, prune these leaves away in the early spring.

## Planting Steps

**Step 1** Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don't mind getting messy, as some of the soil may have been shaken loose in transit.

**Step 2** Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

**Step 3** Allow your plants time to adjust to their new home before re-planting by placing them in a warm sunny spot for 1-2 days. Then they will be ready for re-planting with renewed vigor.

**Step 4** Pull away or cut off any yellow or brown leaves – this is normal.

**Step 5** Transplant into the garden or containers as soon as evening temperatures stay above 40F. Dig holes the width of the root ball and deep enough so that the original top of the soil is flush with the new soil line. Water the new location before and after planting your plant. This will help the young roots stay hydrated. Once you've placed your plant in the hole, fill in the rest of the hole with extra soil or potting mix, ensuring the entire root system is covered with soil.
