Tips for Success

Water: Water your plants immediately after taking them out of the box. Give them enough water so that the soil appears damp and water trickles out the bottom of the pot.

Plants look Dry or Foliage appears Lackluster: Sometimes plants may appear dried out and wilted after the voyage. Do not despair. When this happens the foliage may look lackluster but the rootstock is still perfectly healthy and alive. To plump your plants back up, water them and wait 5 minutes and then water them again. This will generally rehydrate them. Keep these plants well-watered until you can re-plant them into larger containers or in the garden within the next week. If plants arrive dry, it is often because the roots have outgrown the small shipping pots and need more room to grow; roots tend to dry out quickly in small containers. Your plants are very much alive and when you transplant them into larger pots or the earth, they will start growing quickly! So, re-plant them as soon as possible. Remove any yellow or brown foliage. If a lot of the plant's foliage has yellowed, you may cut the foliage back to just above the soil line. This will give your plant a chance to restart, and it encourages bushier, thicker growth.

Time to Plant! Your plants are now ready to be replanted. Follow the planting guide inside for detailed instructions on how to most effectively plant your new plants.

Begonias: These are some of the easiest, longest blooming plants for the garden. They will excel in conditions from the full sun to the partial shade. Planted along the borders, in window boxes, hanging baskets, patio containers or anywhere else you want color, these plants will bring forth flowers late summer every year. If you live where winters get colder than about 35F for prolonged periods, please follow the 'Winter Care' instructions inside to ensure your plants successfully make it through the winter.

SATISFACTION GUARANTEED — OUR Warranty — SATISFACTION GUARANTEED

We aren't happy if you aren't happy. If you have any questions regarding your order please call us at **1-800-428-9726** during the hours of 8:30 am and 4:30 pm EST. You can email questions to us at: **plantquestions@robertasinc.com**. If your bulbs, cuttings, etc. do not sprout, or your plant dies within 90 days from the date of shipment, we will send you a replacement free of charge. We cannot accept responsibility for losses due to extreme weather or neglect. Simply call us at the above toll tree number or fill out the plant replacement form on our website at **RobertasUniqueGardens.com**. Roberta's will replace it with a similar or comparable plant at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following year.

Neither the retailer nor any other company involved in the sale or promotion of this product is a co-warranter of this plant warranty.

Quick Reference

Plant Type: Annual

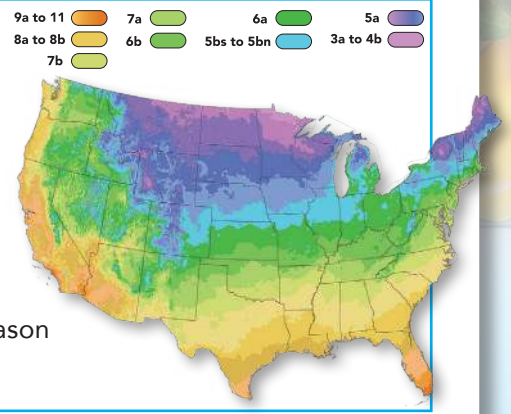
Light/Sun:
Partial Sun to Partial Shade

Mature Height: 12-15”

Mature Spread: 15-18”

Bloom Time:
Summer to Fall, by second season

USDA Hardiness Zones: 9 to 11



Planting Steps

Step 1 Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don’t mind getting messy, as some of the soil may have been shaken loose in transit.

Step 2 Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

Step 3 Allow your plants time to adjust to their new home before re-planting by placing them in a warm sunny spot for 1-2 days. Then they will be ready for re-planting with renewed vigor.

Step 4 Pull away or cut off any yellow or brown leaves, or any old flowers – this is normal.

Step 5 Transplant into the garden or containers as soon as evening temperatures stay above 40F. Dig holes the width of the root ball and deep enough so that the original top of the soil is flush with the new soil line. Water the new location before and after planting your plant. This will help the young roots stay hydrated. Once you’ve placed your plant in the hole, fill in the rest of the hole with extra soil or potting mix, ensuring the entire root system is covered with soil.

Plant Caretaking

Upon Arrival: Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm sunny area for 1-2 days before replanting.

Planting Depth & Spacing: Dig a deep enough hole so that the entire plant easily fits into the hole and the top of the soil line of your plant is flush with the top of the soil in the hole you have dug. It is important that the soil line of your plant does not protrude above the soil line in the ground or container. In the garden space plants about 12” apart.

Potted Plants: Make sure your container has holes to allow excess water to drain. Repot each plant in a container that is about 8-12” wide or you may select a larger container and plant multiple plants together.

Soil Preparation: If you soil is clayish, amend it with standard potting mix to improve drainage. For containers, any regular potting mix is fine.

Watering: To determine if your plant needs water, put your finger in the top of the soil and if the top inch is dry, it is time to water. It is important to make sure young plants do not experience long periods of dryness. However, they also do not like soggy conditions. Regular watering during the blooming season is very beneficial.

Fertilizer: Use Roberta’s Bounty a couple weeks after planting and then once or twice a month all summer long.

Pet Considerations: Ensure your pets do not consume plants.

Winter Care: If planted in containers, in autumn once the leaves have naturally fallen off, cut the plants back to the surface of the soil and place the container in a cool dark spot where temperatures will remain above 35F during the winter. Bring plants back outside in springtime. For plants directly in the garden bed, if your winters are cold, simply dig up the bulbous growth underground and store in a paper bag inside the home all winter. Replant in the spring.
