

Tips for Success

Water: These Echeveria Succulents do not require much water. Water around the outside of the plants every 7-10 days or when you notice the soil is quite dry. Be careful not to water on the top of them, so that no water pools up and remains on the foliage. It is better to underwater than to overwater them.

Echeveria agavoides: This lovely Echeveria succulent is the perfect house plant to adorn your home with. They are perfect for keeping inside the home all year round, or placing outside during the warm months. Inside the home they need to be placed in the sunniest window possible to thrive. If placing them outside in the summer, this needs to be done gradually so that they do not get sunburned from being placed directly in the full sun. Over a couple weeks gradually give them more and more sunlight

Will these Succulents Multiply?: If you keep your plants beyond the holiday season and let them enjoy the summer weather outside, they will eventually create new babies. That is one of our favorite aspects of these succulents.

Will they flower?: After a few years your Echeveria may in fact flower. When they flower this means that their lifecycle is coming to an end. It is one final party in the garden. After they have flowered, you must remove them from the garden and they will be slowly finishing their lives. The good news is that the time leading up to flowering they will create babies that will take their place once the flowering mother plants have been removed. And the cycle of life continues!

PLANTING AND GROWING GUIDE

Echeveria Succulents
Echeveria agavoides

We aren't happy if you aren't happy. If you have any questions regarding your order please call us at **1-800-428-9726** during the hours of 8:30 am and 4:30 pm EST.

You can email questions to us at: plantquestions@robertasinc.com.

If your bulbs, cuttings, etc. do not sprout, or your plant dies within 90 days from the date of shipment, we will send you a replacement free of charge. We cannot accept responsibility for losses due to extreme weather or neglect. Simply call us at the above toll free number or fill out the plant replacement form on our website at RobertasUniqueGardens.com.

Roberta's will replace it with a similar or comparable plant at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following year.

Quick Reference

 **Plant Type:** Tropical

 **Light/Sun:** Full Sun

 **Mature Height:** 12"

 **Mature Spread:** 12"

 **Bloom Time:** n/a

 **USDA Hardiness Zones:** 9 to 11

Plant Caretaking

Upon Arrival: Please take plants out of the box immediately and remove any shipping materials from around the plants.

Planting Depth & Spacing: You may keep your Succulents in their original pots or plant them in new container just deep enough so that the original top of soil line of your Succulents is just below the lip of the new container. When planting multiple together, you may plant them directly next to one another, no space is needed.

Potted Plants: Unless you live where temperatures never dip below 45F, you must plant these in containers. For an individual plant, a 3-5" container is great. Or you may use a larger container to plant multiple together, planting them in close to one another.

Soil Preparation: Any generic, well-draining potting mix is fine.

Watering: These Echeveria Succulents do not require much watering. Give each plant about 4-6 ounces of water every 7-10 days or so, or whenever you notice the soil looks quite dry. Be mindful to water around the outside of the plants rather than on top so that the sparkles stay in tact.

Fertilizer: Use Roberta's Bounty a couple weeks after planting once they've had a chance to adjust to their new home.

Pet Considerations: Ensure your pets do not consume plants.

Where to Plant: Keep plants in a bright room or by a sunny window. In the spring, once temperatures are consistently above 45F, you may enjoy them outside. While outside a location with bright lighting is great, they do not want to be placed directly in the full sun initially. After a few weeks outside you can gradually move them into more sun.

Planting Steps

Step 1 Remove plastic sleeve from around potted plants. Choose a nice container that is just a bit larger than the width of each individual plant to repot into. Alternatively you may choose a larger container and plant as many Echeveria together as you would like.

Step 2 Fill the bottom of the container with potting mix. Pop your Succulents out of their transportation container and nestle it into your new container so that the top of the soil line is just below the lip of the container. They can be planted in closely to the edge of the container, and if planting multiple together, you may plant them closely to one another.

Step 3 Lightly water around the outside of your plants, ensuring no water pools up on the foliage.

Step 4 Place plants in a bright room or near a window as long as outside temperatures remain below 55F. Once temperatures warm up and remain above 45F you may keep them outside.
